

**JAZZ Technology Suite**  
AIM's Solution Accelerator

**Automated  
Information  
Management, Inc.**  
A wholly owned subsidiary of Bodark T Corporation

## **Wayfinding and Auto-Routing** *Combining science and art to enhance any visitor experience!*

### **Exceptional Technology Expertise**

For over twenty-four years, Automated Information Management, Inc. (AIM) has provided enterprise information integration, knowledge management and visualization solutions to complex enterprise problems. Our patent-pending **JAZZ Technology Suite** is being utilized within the commercial and government sectors as an integral component to amalgamate enterprise data across highly disparate databases and data sources, manage network, telephony and infrastructure assets, as well as provide security management visualization solutions. AIM is now introducing its latest solution – automated and intelligent wayfinding.

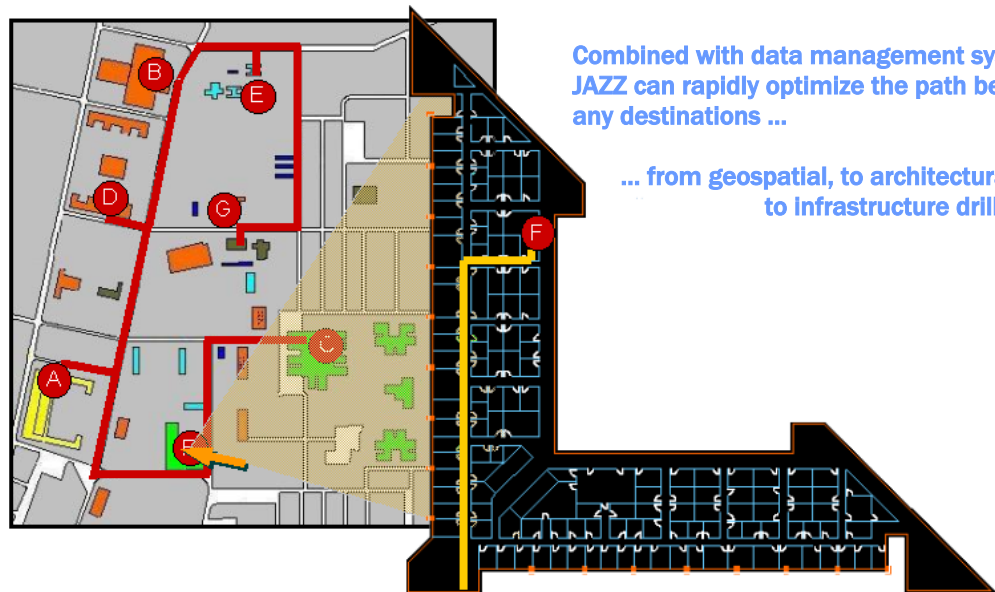

### **Dynamic Visuals Provide an Unparalleled Experience**

Imagine walking up to an intelligent touch screen or RFID-compatible kiosk. You easily and quickly select your desired destination, such as a treatment lab, museum exhibit display, manufacturer's representative at a convention hall, etc. An image map and textual description are dynamically generated to show you precisely how to find your way, routing you automatically around an elevator bank temporarily closed for the day.

Many web mapping applets can get you to the building, but how do you find your way around inside. Pictures do speak a thousand words. **JAZZ** brings science to the art of signage and wayfinding, integrating aesthetics, mobility and communications concerns with automated database-driven image creation and a robust change management practice. Complex and frequent destination changes are easily managed, automatically generating new signage and wayfinding images, then processing work orders and location diagrams to help facilitate physical signage replacement.

#### **Benefits:**

- View optimum path between any destinations.
- Suitable to all geographical, architectural and infrastructure applications.
- Accommodates path restrictions and off-limit conditions.
- Database-driven, dynamic images eliminate costly maintenance of drawing images.
- Robust change management practice simplifies maintenance.
- Auto-print new signage as destination changes occur.
- Integrated work order processing documentation and diagrams.
- All solutions incorporate patent-pending **JAZZ Technology Suite** software.
- AIM provides the total solution.

Combined with data management systems,  
**JAZZ** can rapidly optimize the path between  
any destinations ...

... from geospatial, to architectural  
to infrastructure drill down!

*Graphically drill-down directly to specific destination!*

## The JAZZ Technology Suite

The **JAZZ Technology Suite** creates an environment, a common interactive viewing portal, where you can graphically, and intuitively, view any information:

- About any asset, physical or logical,
- From any disparate databases or data sources,
- At any location,
- From anywhere,
- At any time,
- With just a browser!

Our unique core technologies bring unprecedented visual clarity to the interpretation and assessment of complex data by allowing users to:

- Easily examine data and relationships via a point-and-click graphical and geo-graphical drill-down approach on objects right within your browser.
- View any associated information without cumbersome and resource draining embedded object data. **JAZZ** allows the dynamic visual updating of browser-based drawings with no performance degradation.
- Select relevant data through parameter-based filters and menus, zooming through physical views of only that data important to you at that moment.
- Maintain physical and logical data relationships throughout the add/delete/modify process, regardless of data complexity or location.
- Access auto-generated drawings, reflecting any changes to source data.

## Your Solution is Closer Than You Think

Virtually any enterprise wayfinding and auto-routing application can be generated within a few weeks using a **JAZZ** visualization solution. Using the **JAZZ Technology Suite**, AIM successfully delivered a major enterprise solution for a Fortune 100 client within three months, a solution they attempted to develop for more than six years before finally having to abandon their efforts.

Wayfinding / Auto-Routing applications:

- Hospital Patient/Visitor Information Systems
- Museum Information Systems
- Convention Center Information Systems
- RFID Tracking Location Systems
- Emergency/First Responder Solutions
- Help Desk Logistics Planning Systems
- 3-D IT Network Designer
- Outside Plant Facility Management
- Traffic Routing Systems
- Real Estate Visitation Routing
- Logistics Optimization Systems
